

# The New Financial Landscape: Forces Shaping the Revolution in Banking, Risk Management and Capital Markets (OECD documents)

The financial landscape has changed dramatically over the last two decades. To a large extent, this change has been the result of domestic and external financial liberalization and spectacular technological advances, leading to increased competition, stronger financial market integration, and the development of new financial products. This publication analyzes trends and structural change in, and policy implications for, banking, risk management, and capital market operations. The main forces likely to shape the financial services industry in the future are also examined.
