

# Possessing Genius: The Bizarre Odyssey of Einsteins Brain

For nearly half a century the pickled brain of Albert Einstein has roamed the world-in Tupperware containers, courier packages, and, most famously, car trunks. In Possessing Genius, award-winning journalist Carolyn Abraham presents the whole story-the mysteries, myths, and almost unbelievable facts-of the brains postmortem odyssey. The story begins with in April 1955, when Thomas Stolz Harvey, chief pathologist at Princeton Hospital, found himself in charge of dissecting the cadaver of the greatest scientist of his age, perhaps of any age. He seized the opportunity to do something noble. Using an electric saw Harvey sliced through the skull and gingerly removed the organ that would both define and haunt the rest of his life. Harvey struck a controversial deal with Einsteins family to keep the brain, swearing to safeguard it from souvenir hunters and publicity seekers, and to make it available only for serious scientific inquiry. Not a neuroscientist himself, he became the unlikely custodian of this object of intense curiosity and speculation, and the self-styled bulwark against the relentless power of Einsteins growing celebrity. Bridging the post-war era and the new millennium, Possessing Genius is the first comprehensive account of the circuitous path the brain took with Harvey during the decades it remained in his possession. Harvey permitted Einsteins gray matter to be sliced, diced, probed, prodded, and weighed by those hoping to solve the enigma, and locate the source, of genius itself. Einsteins brain was more than a subject of scientific investigation but a kind of holy relic; the history of its perambulations since 1955 reflects the vicissitudes and vanities underpinning what we believe makes us human. Abraham has gathered together all fascinating details and documents of the brains saga-including previously unpublished correspondence between Harvey and Otto Nathan, the

executor of Einsteins estate-and from them woven a story that is both deeply engrossing and highly illuminating.
