

# The First Transplant Surgeon: The Flawed Genius of Nobel Prize Winner, Alexis Carrel

This is a new account, of how, in the early 1900s, the French-born surgeon Alexis Carrel (1873-1944) set the groundwork for the later success in human organ transplantation, and gained Americas first Nobel Prize in 1912. His other contributions were the first operations on the heart, and the first cell culture methods. He was prominent in military surgery in WW1, and in the 1930s, gained further fame when collaborating with the aviator Charles Lindbergh on an organ perfusion pump. But controversy followed his every move, including concerns over scientific misconduct, notably his claim to have obtained immortal heart cells, now shown to be fraudulent. In 1934, he authored a best-selling book *Man, the Unknown* based on his strongly-held conservative, spiritual, political and eugenic views, adding a belief in faith healing and parapsychology. He settled in Paris in WW2 under the German occupation, believing that the conditions would allow him to refashion the degenerate Western civilization. His extremist views re-emerged in the 1990s when they proved interesting to right-wing politicians, and in a bizarre twist, jihadist Islamists now laud his criticisms of the West.

The Paperback of the First Transplant Surgeon, The: The Flawed Genius Of Nobel Prize Winner, Alexis Carrel by David Hamilton at Barnes & Noble. FREE. With his tissue culture work stalled, and the disappointments over the Mousery project, Carrel was restive his output of conventional scientific papers almost This is a new account, of how, in the early 1900s, the French-born surgeon Alexis Carrel (1873-1944) set the groundwork for the later success in human organ The First Transplant Surgeon: The Flawed Genius of Nobel Prize Winner, Alexis Carrel, edited by David Hamilton.
